COMPANY

Since 1968, we specialize in the development and production of plastic profiles. We guarantee highest quality and flexibility as well as short lead times by efficiently streamlining technical engineering and tool building with our extrusion and co-extrusion lines.

ISO 19001:2015 | Fenêtres PVC certifiées CSTB | ISO 14001:2015 Certified

Through in-house developed tools, we extrude plastic profiles out of PVC in various grades, ABS, PE, LuranS and ASA as well as transparent PVC. The portfolio is made available in all RAL-based colors by leveraging recycled or brand-new plastic granulates.

We offer co-extrusion services, cater consignment requests, as well as small series orders.

TOOL BUILDING

The experience and knowledge gained by developing around 3,000 tools enable our experts to cater to customer-specific requirements fast and cost efficient. Throughout the product life cycle, high flexibility and production security are ensured, especially due to the lifetime maintenance guarantee of the tools.

COMPETENCIES

CUSTOM PROFILES

Our core competency lies in developing and producing custom-made tools and plastic profiles for specific customer and industry demands.

STANDARD PROFILES

Our portfolio includes a broad range of instant made-to-order plastic profiles in numerous geometries and variations (flat, rectangle, square, H, V, O, Z and T shapes).

PROFILE PORTFOLIO

REFERENCES

We are an established supplier to international market leaders and system integrators, especially in the field of facade, machine, window and door framing solutions. Moreover, our plastic profiles are leveraged in countless applications such as bowling alleys, cinemas, aquariums, ski lifts, aircrafts and swimming pools.
